

Evaluation for the European Commission on the future of autonomous vehicles in Europe

Level: Supra-National
Geographical Area: Europe

Ubiquity Consulting was selected by the European Commission's Executive Agency [INEA](#) (Innovation and Networks Executive Agency) to support evaluations on a Horizon 2020 call related to autonomous vehicles: **"Human centred design for the new driver role in highly automated vehicles"**.

In this context, Ubiquity Consulting had the opportunity to provide technical advising for the automated and highly-automated vehicles sector, notably in terms of latest vehicle developments (upcoming challenges involving C-V2X vs. U-V2X, available and developing vehicles technologies for reaching SAE automated driving levels 4 and 5), infrastructure and environment developments (Operational Design Domains for Automated Driving Systems, etc.) or in-car systems (artificial intelligence applied to human-vehicle interaction technologies), thus supporting INEA in informed decision-making for the future of autonomous vehicles in Europe.
